
Preferred Alternative Stage 1 Operations

DEFT-NoName Coordination
Team
(DNCT)

DNCT Charge

- DNCT coordinating with DEFT and NoName will develop several operational scenarios for Stage 1.

DNCT Guidance

- For evaluation purposes, baseline level of exports *Accord* + CVPPIA actions
- Consider flexible operations and environmental water account to improve protection for fish and meet water quality quality and supply export targets
- Share benefits from new supplies
- Evaluate each scenario for level of certainty to move towards recovery

DEFT's Role

- Recommend alternative fish protective measures to DNCT
- To the extent possible, reconcile basic differences in biological hypotheses in DEFT and recommend program to verify conclusions
- Evaluate each DNCT scenario for level of certainty to move towards recovery

NoName's Role

- Suggest to DNCT candidate water supply measures
- Determine water supply benefits of each DNCT scenario

DNCT Scenarios

- Based on structural actions in the preferred alternative
- Changes in baseline operations
- Flexibility in operations
- Real-time flexibility-monitoring
- Environmental water account
- Shared benefits of new supplies

Products and Schedule

- 4 Weeks - A range of draft operational scenarios, with approximate benefits and impacts of each
- Early 1999 - A short list of operational scenarios with complete evaluation of level of certainty to move towards recovery and water supply and water quality benefits
